

# Dejavoo QD2 Mobile Wireless Android POS Terminal

High End Android Terminal At Traditional Terminal Price

The Dejavoo QD2 is a sleek wireless Android OS terminal that gives merchants the ability to take all forms of payments.

The next generation of contactless payment devices, the Dejavoo QD2 mobile terminal is feature-rich for businesses that accept credit cards. The terminal includes built-in capability to process both EMV chip cards and contactless (NFC) payments, such as MasterCard PayPass and Visa payWave. The machine also allows acceptance of traditional magnetic stripe credit cards, and both PIN-based and signature-based debit cards.

And, with a touchscreen display, long lasting battery life, and various connectivity options – this Android operated payment device will help your merchants better serve their customers.

## QD2 Features:

- Android OS
- EMV/NFC/MSR/PIN Enabled
- 4G + Wi-Fi + Bluetooth
- 5.5" Touch Screen
- Long Lasting Battery
- All-in-One DejaPayPro
